Header:

Organization/Team Name:

Dates: Duration of involvement.

Role: Your specific title (e.g., Team Member, President, Research Assistant).

Overview

A 1-paragraph summary of the project’s goal, the team’s achievements (like competition rankings), and the technical materials/tools used.

Individual Responsibilities

Use bullet points starting with strong action verbs (e.g., "Designed," "Manufactured," "Managed").

Quantifiable Results: Include specific tolerances, weights, or speeds (e.g., "machined to within $\pm 0.001in$").

Soft Skills: Mention communication, funding, or mentoring roles.

Visuals & Links

Media: Include photos of the final product, "action shots" of testing, and CAD/FEA diagrams.

Captions: Label your photos (e.g., "L to R: Me with the prototype...").

External Proof: Provide links to news articles, YouTube videos of tests, or technical papers.

Pro Tip: Use QR codes for links so they are accessible from a printed copy.

4. Technical Deep Dive (Optional)

Sample Write-up: If you have a particularly complex task, include a "Sample Write-up" or "Project Test Report".

Data Visualization: Include graphs (like acceleration vs. time) to show you can analyze and verify your models through testing.

5. Handling Sensitive/Proprietary Work

If you cannot show photos due to NDAs or commercial sensitivity, explicitly state this.

Workaround: Instead of photos of the actual hardware, use generic diagrams, flowcharts of your process, or scripts you wrote (e.g., MATLAB) to show the method without exposing the secret.
